

# Have a cough that won't go away?

It's unlikely to be lung cancer, but best to get your GP to check it out.

Other symptoms include:

- Wheezing or trouble breathing
- Feeling more tired than usual
- Chest infections that won't go away after antibiotics
- A hoarse voice
- Chest pain
- Coughing up blood-stained phlegm
- Loss of appetite and/or weight loss
- Swelling around your face and neck
- Trouble swallowing
