Coping with Fatigue

Caring for people with cancer
This booklet has been written to help you cope with fatigue due to cancer and its treatment. It has been prepared and checked by cancer doctors, other relevant specialists, nurses and patients. The information in this booklet is an agreed view on managing fatigue and the key aspects of living with it.

If you are a patient, your doctor or nurse could go through the booklet with you and mark sections that are important for you. You can make a note below of the contact names and information that you may need.

Address
The Irish Cancer Society is the national charity for cancer care, dedicated to eliminating cancer as a major health problem and to improving the lives of those living with cancer. This booklet has been produced by Nursing Services in the Irish Cancer Society to meet the need for improved communication, information and support for cancer patients and their families throughout diagnosis and treatment. We would like to thank all those patients, families and professionals whose support and advice made this publication possible.

FATIGUE ADVISERS
Dr Miriam O'Connor, Consultant Medical Oncologist
Dr Malcolm Garland, Consultant Psychiatrist
Loretto Gallagher, Clinical Nurse Manager (Oncology)
Kay Leonard, Advanced Nurse Practitioner

Introduction

This booklet has been written to help you find ways to cope with fatigue. This is sometimes caused by cancer and its treatment. It can affect children as well as teenagers and adults. The word fatigue is used to describe feelings of tiredness that may be present all or most of the time. The tiredness is not relieved by rest and may stop you from doing the things you normally do. It may also affect how you cope with your illness and make you feel sad and upset. People who have fatigue usually have no energy. You may find it hard to do simple, everyday things that people usually take for granted.

At the end of this booklet there is a list of books and CDs you might find useful. There is also a list of websites and special groups to help and support you at this time.

Reading this booklet

Read the sections of this booklet that are of interest to you only. You may find that there is a lot of information to take in and that it can be hard to concentrate, especially if you are feeling anxious or worried. Remember you do not need to know everything about fatigue straight away. Read a section and when you feel relaxed and want to know more, read another section.

If you do not understand something that has been written, discuss it with your doctor or nurse. You can also call the National Cancer Helpline on 1800 200 700. It is open Monday to Thursday 9am–7pm and Friday 9am–5pm.

Causes and effects of fatigue

Fatigue

Fatigue is very common during cancer and its treatment. In fact, about 3 out of 4 patients will feel fatigued at some stage of their cancer journey. You may feel overwhelmed by the effect fatigue has on you. It can often reduce your enjoyment of life. Feeling tired all the time is especially difficult when you are already coping with cancer.

Fatigue may be due to the cancer itself or as a result of symptoms caused by the cancer. It can also be a side-effect of treatment. Health professionals caring for people with cancer now consider fatigue to be at least as distressing and disabling as other side-effects of cancer treatment. Fatigue is recognised as a major problem for many people with cancer.

Treating the causes of fatigue can help to reduce it.

There are ways in which your doctor can treat your fatigue. Treating the causes of fatigue can help to reduce it. Research has shown that people with cancer find that it is the symptom, or side-effect, which is most disruptive to their daily life. Do let your doctor or nurse know how you are feeling so that they can help you. There are also things that you can do for yourself which may help you cope with the problem of fatigue.
What causes fatigue?

There are many causes of fatigue and knowing about them may help you to cope with it. The possible causes of fatigue include:

Treatment

- **Surgery**: It can take quite a while to recover from surgery. You may feel tired and need to take things easy for a while. This effect is usually temporary. But some types of surgery may cause ongoing problems with fatigue, for example, if surgery to your stomach leads to problems with absorbing food.
- **Chemotherapy and radiotherapy**: You may feel very tired during and after chemotherapy and radiotherapy. It may be due to the treatment itself or travelling to and from the hospital. Your energy levels should start to improve 6 months to a year after the treatment. But some people still feel tired 2 years after their cancer treatment has ended.
- **Hormone therapy**: Hormone therapies are treatments that can stop or slow the growth of cancer cells. These are often given for several years and can cause fatigue.
- **Biological therapies**: These are a form of treatment that makes your body’s immune system attack cancer cells. There are a number of different biological therapies available to treat various types of cancer. Some but not all therapies can cause a flu-like reaction or tiredness after treatment. These side-effects usually go away when treatment stops or soon afterwards. Talk to your doctor or nurse. He or she will explain your treatment to you and show you how to reduce the side-effects.

Anaemia

Anaemia is a common cause of fatigue in people with cancer. It is caused by a shortage of haemoglobin and oxygen in your bloodstream. The red blood cells, which contain haemoglobin, carry oxygen to all the cells of your body to provide energy. If the number of red blood cells is low, the amount of oxygen reaching your cells is reduced.

If you have anaemia, you might:

- Feel breathless some or all of the time. You may also feel dizzy and lightheaded
- Lose interest in sex (men and women)
- Find that you cannot get or maintain an erection (men)
- Have trouble getting to sleep
- Have aching muscles and joints
- Have more chest pain due to heart problems (angina)

Causes of anaemia

Radiotherapy for cancer can reduce the number of red blood cells made by your bone marrow for a time. This only happens if the treatment is being given to an area of your body which includes the bone marrow. Such areas include the breast bone (sternum), the hip bones, or the long bones of your arms and legs.

Chemotherapy can also reduce the number of red blood cells made. This may lead to anaemia. Your doctor will keep a check on your haemoglobin if you have cancer or are having cancer treatment.

You can use the fatigue diary in the centre of this booklet to record your haemoglobin levels. Over time you will see how this affects your everyday life and level of fatigue. You may find that you feel much more tired when your haemoglobin is low. If you feel very tired tell your doctor or nurse. He or she may be able to give treatment for the anaemia. This can reduce the fatigue and help you to feel better.

If you feel very tired tell your doctor or nurse.

Treatment of anaemia

The treatment for anaemia will depend on the cause. Your doctor may decide to give you a blood transfusion or erythropoietin therapy.

A blood transfusion gives red blood cells directly into your bloodstream (through a drip). This will quickly increase the number of red blood cells travelling around your body.
Erythropoetin is a natural hormone which helps make red blood cells. Manmade versions of erythropoetin are available. They can be given if you are having chemotherapy to raise your level of red blood cells and reduce feelings of fatigue.

Eating problems
If you are feeling sick (nausea), you are likely to eat less. This means you will not be getting enough energy from food. If you are actually vomiting, you are not absorbing the food. You may feel weak and tired as a result. If you have nausea or vomiting, your doctor can prescribe anti-sickness drugs (anti-emetics) that can help. These should be taken regularly. Poor appetite due to treatment can mean that you have less energy. Chemotherapy in particular can cause changes in appetite and taste. If you find that some foods no longer appeal to you, try new and different ones. Talk to the hospital dietitian who will advise you on the best foods to eat.

Ways to cope with eating problems
It is best to eat small meals more often. You may find it helpful to get someone else to prepare food for you. If you do not feel like eating, try using ready-made, high-calorie drinks. You could try unflavoured high-energy powders that add calories to food without adding bulk. Most of these drinks and powders can be bought in any chemist. Some are available on prescription, and your doctor can arrange for you to get them.

The Irish Cancer Society has a booklet, Diet and Cancer, that might help you. The booklet has helpful tips on coping with eating problems caused by cancer or its treatment. Call the National Cancer Helpline on 1800 200 700 for a copy.

Pain
Many people with cancer do not have any pain. But for people who do get pain it can be a common cause of fatigue. If you are in pain, tell your doctor or nurse about it straight away. Be honest about the level of pain you are in. There is no need to suffer in silence or play down the amount of pain that you have. Surgery, radiotherapy and chemotherapy can all help to ease your pain. There are also a lot of good painkillers available today. If the medication does not kill the pain, tell your doctor or nurse. You may need to try out different painkillers before you find one that suits you best.

There are other ways to treat pain such as nerve blocks and epidural injections. If you need more information do ask your doctor or nurse. Or you can call the National Cancer Helpline on 1800 200 700 for a copy of our factsheet on pain and cancer.

Medication
Your doctor may prescribe medication to control pain or reduce the side-effects of treatment. Some of the drugs used may cause fatigue or make you feel drowsy. Ask your doctor before you start any new medication what side-effects you can expect. The fatigue and drowsiness usually wear off after a few days. But if the fatigue persists tell your doctor or nurse, as your medication can be changed.

Other symptoms
Cancer may cause other symptoms such as breathlessness or fluid retention. These symptoms are common causes of fatigue. If you have an infection or fever, your body needs more energy and this may lead to fatigue. Treating the different symptoms that are causing or contributing to fatigue can often help to relieve it. It is important to let your doctor or nurse know about any symptoms that you have.

If you are in pain tell your doctor or nurse about it straight away.
Psychological effects of cancer
Anxiety, depression, stress and tension can all contribute to fatigue. You may find that you have trouble getting to sleep. You may feel anxious or depressed when you are first diagnosed with cancer. These feelings generally become easier to manage as you adjust to your illness. You may find it useful to share how you feel with your partner, family or a close friend. If your mood continues to be low most of the time, you may need help to overcome depression. You can discuss this with your doctor. He or she can refer you to a counsellor or prescribe medication if you think that would be helpful.

The Irish Cancer Society has a booklet, *Understanding the Emotional Effects of Cancer*, which can help you recognise if you are depressed. It also suggests ways of overcoming and dealing with depression. Call the National Cancer Helpline 800 200 700 if you would like a copy.

Effects of fatigue
Fatigue can affect you in different ways. Some people find that their fatigue is very mild and does not interfere much with their daily life. But for others it is very disruptive. Fatigue can often affect the way you think and feel. You may find it impossible to concentrate on anything. This may affect your work but it can also happen with things that you usually enjoy doing. Even reading or watching TV can be difficult.

Fatigue can affect your relationships with family and friends too. It can make you impatient with them and other people around you. You might even avoid socialising because it is too much effort.

The different levels of fatigue are described in the fatigue diary at the centre of this booklet.

Common effects of fatigue
Some of the more common effects are described below:
- You cannot complete the smallest chore. Brushing your hair, showering or cooking can seem impossible.
- You feel as if you have no energy and could spend whole days in bed.
- You have trouble thinking, speaking or making decisions. You may find it difficult to remember things.
- You might feel breathless after only light activity. You may feel dizzy or lightheaded.
- You have trouble getting to sleep (insomnia).
- You lose your sex drive.
- You may feel sad and upset.

How to talk about fatigue
You might find it helpful to write down the questions you want to ask your doctor or nurse about fatigue. Ask them to repeat and explain anything that you do not understand. Write down the answers if you like. Your doctor or nurse can only help if you tell them about your symptoms. It can be hard for anyone to understand how much fatigue can affect your life unless they have experienced it themselves. You may need to emphasise to your doctors and nurses the difficulties that it is causing you.

Discuss everyday actions that you find difficult, such as climbing stairs, cooking, bathing. If you have kept a fatigue diary you can bring it in to share with the medical team looking after you.

At times you may find it hard to discuss your emotions, especially when you are ill. You might worry that you will upset yourself and others. Do tell your doctor or nurse how you are feeling. It might help if you take someone to the appointment with you. You may find it hard to remember what the doctor or nurse have said and your relative or friend can help to fill in the gaps. There is also a list of the most commonly asked questions at the back of this booklet.
Ways of treating fatigue

**Coping with fatigue**

**Planning**

Planning ahead is important. Ask your doctor before you start treatment what side-effects you can expect. Do the things that are most important to you when you feel least tired. Use the fatigue diary to write down the times when you feel at your best and when you feel most tired. This will help you to plan your activities depending on your energy levels.

>>> Try to find time each day to do something you enjoy.

**Energy levels:** Keep a note of your energy levels during the day. Do this by taking time to check yourself and listen to your body. This will help you to identify the days on which you are best able to work. You may have to accept the fact that you won’t be able to do everything you used to do. It may be helpful early on to decide which activities you are prepared to give up. Remember not to use up all of your energy on doing tasks. Try to find time each day to do something you enjoy.

**Rest and sleep:** Pace yourself and plan enough rest and sleep periods. It makes sense to plan a period of rest after a period of activity. You may find that you need to rest after meals too. Short naps and rest periods are useful as long as they don’t stop you from sleeping at night.

**Treatment:** It is also important to plan your days around your treatment. Try to avoid anything energetic or stressful for 24 hours before and after your treatments, or if you have a fever (high temperature) or low blood counts.

National Cancer Helpline 1800 200 700
In the home

Plan your day so that you have time to rest and do the things you want to do most. The fatigue diary at the centre of this booklet will help you to see how treatment affects your energy levels. It will allow you to plan activities for times when you have more energy. Doing things for yourself is very important but try not to feel guilty if you have to ask for help from other people. Think about some of the following suggestions.

Managing day-to-day

Ask your family, friends and neighbours to help you around the house, with travelling to hospital, with your children or with the shopping. Talk to your medical social worker also and find out what support services are available. Use the extra free time to rest or do something you especially enjoy.

Hints & Tips – everyday tasks

- Spread tasks out over the week.
- Do a little bit each day rather than a lot in one go.
- Ask others to do heavy work where possible.
- Employ a cleaner. If you cannot afford one, talk to your medical social worker. You may be entitled to a home help.
- Use a wheeled shopping bag to carry supplies and groceries.
- Sit down to do whatever chores you can.
- Use long-handled dusters/mops/dustpans where possible.

Shopping

Ask others to do the shopping for you. If possible, do your shopping on the internet and have it delivered. If you cannot, or would rather do the shopping yourself, these suggestions may help:

Hints & Tips – shopping

- Make a list before you start.
- Write the shopping list following the layout of the store.
- Ask someone to go shopping with you. Get a lift to and from the shops.
- Use the shopping trolley for support. Avoid lifting heavy weights.
- Stock up on household items you use regularly. Do this when you feel less tired or have someone to help you with the extra shopping.
- Ask for help in the supermarket with packing your bags and carrying groceries to the car or ask for home delivery.
- Shop at less busy times.

Laundry

If you live with other people ask them to do their own washing and ironing. If this is not possible, do a small amount of washing and ironing each day.

Hints & Tips – laundry

- Use a trolley where possible to transport your washing to and from the washing machine.
- Get help to hang out the washing.
- Use a lightweight iron.
- Iron essential items only.
- Sit down to iron.
- Slide the iron onto a heatproof pad to avoid lifting.
Meal preparation
Try cooking simpler meals. There is a large range of ready-made meals available in most supermarkets. Stock up on these and use them when you are especially tired. Ask members of your family to have their main meal during the day, if possible, when they are at work or at school.

Hints & Tips – cooking & food preparation
- Prepare meals when you are feeling less tired.
- Make up double portions so that you can freeze half for later.
- Sit down while preparing meals. Avoid bending and stretching when preparing meals.
- Don’t lift heavy pans or dishes out of the stove or oven. Ask others to move heavy items to the table.
- Line grill pans with foil to cut down on cleaning. Use oven dishes you can serve from, to save washing up. Let dishes soak rather than scrubbing them and leave dishes to dry.
- Use placemats instead of tablecloths. They are easier to place on the table and to clean.
- Ask someone to take out your rubbish bags.

Childcare
One of the worst aspects of fatigue is feeling that you are letting your family down. This can be even more upsetting when you have children. There are many things that may help.
- First of all, explain to your children that you are feeling tired and cannot do as much with them as before. You may be surprised at how well they respond.
- Plan activities with your children that can be done sitting down. Reading a book, drawing or colouring, doing a puzzle, or simply watching a favourite television programme together is an ideal way to spend time with your children.
- Go to places where you can sit down while your children enjoy themselves.

In the workplace
You may find that you need to cut down your hours or stop working altogether. It can help to talk to your employer, human resource manager or occupational health department. Let them know that you may need some time off due to the cancer or its treatment. Don’t feel that you have to work if you are too tired. But if you do want to carry on working, you may be able to find ways of making your work less tiring.

Hints & Tips – employers can help by
- Changing your hours so that you can travel to and from work at less busy times.
- Asking colleagues to be supportive and to help with some of your work.
- Finding you a parking place near your workplace.
- Allowing you to take a short break every now and then to lie down and rest.
- Allowing you to work from home.
- Finding you lighter work if your job involves physical exertion or heavy lifting.

If you cannot continue working or are self-employed, it may be useful to talk to the Dept of Social Protection. You may be entitled to claim certain benefits. See page 30 for more information.
Eating and drinking

If you have problems eating you may begin to lose weight. This may be due to the cancer or your treatment. Sometimes when you are weak or tired you can also lose interest in your food. It is best to try and eat as well as you can. Here are some suggestions that might help.

**Hints & Tips – eating and drinking**

- Keep a diary of what and when you eat every day. If you have taste changes, try new foods, or eat the foods that taste best.
- Ask for help in preparing your meals.
- Try eating little and often. Eat small meals and snacks throughout the day.
- Eat when you feel hungry.
- Drink lots of clear fluids such as water and fruit juice.
- If you do not feel like eating, try replacing some meals with high-calorie drinks.
- Ask to see a dietitian if you are losing weight. He or she will keep an eye on your weight and give you advice on the best foods to eat.

There is a useful booklet, *Diet and Cancer*, available from the Irish Cancer Society. Call the National Cancer Helpline on 1800 200 700 if you would like a free copy.

Taking exercise

Try to remain active and exercise a little both during and after cancer treatment, even if you do not feel like it. Remember to get a good balance between being active and taking time to rest. This allows your muscles time to recover after activity. If exercise is impossible, try to remain active in your daily routine.

**The benefits of exercise**

Research has shown that there are many benefits to exercise:

- It helps to reduce the symptoms of fatigue, the side-effects of cancer treatments, and improves your overall quality of life.
- It keeps and improves your physical abilities and prevents your muscles wasting due to inactivity.
- Regular exercise builds up your physical fitness level, improves your energy, strength, balance, stamina and co-ordination.
- Regular exercise along with a healthy diet can help reduce the risk of breast cancer and bowel cancer coming back. It can also help you keep a healthy weight and heart.
- Light exercise encourages your body to release endorphins. These are often called ‘feel good hormones’. When released, they can lift your mood and sense of well-being.

Remember a little exercise is better than none. So even a short walk is a good place to start. It is never too late to look for advice.

**Who can advise me?**

Your doctor, specialist nurse or physiotherapist can all give you advice. You might also be referred to a physical activity programme.

**Doctor or specialist nurse:** Do ask your doctor or nurse for advice before starting or increasing the amount of exercise you take. They can advise you on the type and amount of exercise that is safe for you, while considering any other medical conditions you might have. The amount you do will depend on your type of cancer, your treatments, and your general fitness level. Be careful not to overdo it at the beginning, but build on it gradually.

**Physiotherapist:** The physiotherapist at the hospital can advise you about which exercises would suit you best. They can offer advice on how to get started with exercising and ways to improve your balance. Advice on exercises to strengthen your hands, arms or legs can also be given. The physiotherapist can offer tips on how to manage fatigue and teach you other exercises to meet your needs.
Coping with fatigue

Sleeping well

It is vital to keep a normal sleeping routine when you are unwell. Sometimes your fatigue may make you feel like sleeping all the time. Sleeping well is very important and may help to reduce fatigue. It may also reduce your need to sleep during the day. There are many ways to overcome fatigue. Your nurse or doctor will be happy to discuss these with you. In the meantime it may help if you:

**Sleep just long enough.** Limiting time in bed seems to produce better quality sleep. Sleep as long as you need to feel refreshed and healthy during the following day.

---

Physical activity programmes: You might be able to take part in a supervised group exercise programme. Or you can be referred there by a health professional. Experienced fitness trainers run these groups over a number of weeks. The programmes can be a good source of peer support as well as being sociable. They can also motivate you to get and remain active safely. In fact, you might find it easier to keep exercising if you do it with other people. Before you start, your trainer will explain the benefits and risks of increasing your physical activity. After that, you may be asked to give your written consent. The fitness trainer will match the types of exercises to your individual needs, bearing in mind your current fitness level. He or she will then support you throughout the programme.

**How to get started**

Start gradually if you have not been taking regular exercise before your cancer diagnosis. Regular exercise usually means 30 minutes of moderate activity at least 3–5 times a week. At this level, your heart rate will increase but you can still talk. You can build up to this gradually and also break up the 30 minutes into three 10-minute sessions.

A simple and free activity like walking is excellent. You could also increase it a little further every day or every week. Set yourself some achievable goals, while pacing yourself and listening to how your body feels. Your muscles will tell you when you need to ease back or rest.

Even doing an activity like tai chi or yoga for a few minutes every day can help. Recording your achievements in a diary every day can also help you to check your progress. Overall, make sure the exercises are safe, work well and are enjoyable.

**Simple ways to keep active:**

- Go for a walk during the day.
- Cycle your bike.
- Do some gardening.
- Take the stairs instead of the lift.
- Park your car in the farthest parking space at work and walk to the building.
- Get off the bus a few stops before your destination and walk the rest of the way.

---

 ích & Tips – exercise safely

- Exercise on a flat surface and avoid exercises that might increase your risk of falling or injuring yourself.
- Make sure you drink enough water during and after exercise to prevent dehydration.
- Wear well-fitting supportive shoes like laced flat shoes or trainers.
- If you are having chemotherapy, it is best to avoid the swimming pool. Consider using the gym during the off-peak times when quieter.
- If you are having radiotherapy and have a skin reaction, avoid the swimming pool until after your skin has healed. The chemicals in the water may cause an irritation.
- If you are anaemic or have low platelets, ask your doctor for advice before starting. (Anaemia is a low number of red blood cells, whereas platelets are cells that help your blood to clot.)
- If you get chest pain, dizziness, nausea, difficulty breathing or a racing heart, do stop the exercise and tell your doctor.
- Do not exercise if you feel unwell, are breathless, in pain, or have any symptom that worries you. Discuss it with your doctor.
- Continue to wear compression garments during exercises if you have lymphoedema.
- Avoid high-impact exercises or contact activities if you have bone secondaries or osteoporosis.
Sleeping well is very important and may help to reduce fatigue.

Wake up at the same time every day. A regular wake-up time in the morning may strengthen your sleep routine. It may eventually lead to a regular time of getting to sleep.

Exercise regularly if you can. A steady daily amount of exercise may help to deepen sleep over the long term. This is best done during the day rather than in the hours close to bedtime.

Eliminate noise. Occasional loud noises, such as aircraft flying overhead, disturb sleep. If your bedroom is noisy, you could mask some of the noise using a small electric fan, or you could use earplugs.

Keep a steady temperature in your bedroom. Temperature extremes can disturb sleep. The room temperature should be comfortably warm.

Keep your bedroom for sleep. It may help to remove the television set from your bedroom. This helps to create a calm relaxing space and keeps noise and stimulation to a low level.

Have a bedtime snack. Hunger can often disturb sleep. A light bedtime snack, warm milk or a hot drink might help you to sleep better.

Avoid stimulants. Many poor sleepers are very sensitive to stimulants. It is best to avoid cola drinks, coffee, strong tea and chocolate during the evening.

Know how naps affect you. Some people find that daytime naps help them sleep better at night, while others sleep less well after them. Find out what suits you best.

Limit your intake of alcohol. If you are feeling tense, alcohol can help you to fall asleep more quickly, but the sleep tends to be broken. So avoid large amounts of alcohol near bedtime.

Keep a notebook and pen beside your bed. Get up if you wake at night worrying or your thoughts are racing. Write down all your thoughts in the notebook and give yourself permission to let them go until the morning. Then if you wish, you can work through them the next day with the support and advice of others.

Know when to say enough. Rather than lying in bed tossing and turning you could also get up and watch television or read a book. Wait until you feel tired again and then go back to bed. Audiotapes with stories may help you to sleep. These are available in most public libraries or bookshops. Mental exercises can also help you to sleep. These usually take about 10 minutes and include:

- Trying to remember the lines of a poem or Christmas carol
- Making alphabetical lists of girls’ or boys’ names, countries, trees or flowers
- Reliving a favourite experience in every detail
- Writing mental letters
- Relaxation exercises

Your body will still benefit from lying quietly in bed, resting, even if you are not actually asleep. Although you might feel as if you have been awake all night, you may well have managed to have several hours of good-quality sleep.

Relaxation

It is very important that you make time for activities that relax you. Stress uses up energy and might make you tired. It is natural to feel more stressed than usual when you start your cancer treatment. The following suggestions may help you to relax:

- Talk to others about anything that is worrying you. You may find it difficult to talk to your family and friends. Ask your doctor to refer you to a counsellor if you think it would be helpful.
- Try to take your mind off your worries by reading, seeing friends and listening to music.
- Take light exercise such as walking.
- If you can, try to avoid situations that make you anxious.

Many people find it difficult to unwind, especially if the stresses and strains of the day are difficult to forget. But specific relaxation techniques can help to relieve tension.
Types of relaxation exercises

There are two types of relaxation exercise:

- Physical exercises that help to relieve tension in your body
- Mental exercises that help to relax your mind

Find a quiet, warm, dimly lit, relaxing place where you will not be disturbed. Then lie or sit in a well-supported position. You will get the most benefit from these techniques if you practise them for 5 to 15 minutes each day. Just experiment until you find the best one for you.

It is not possible to describe each technique in detail in this booklet, but the following list will give you an idea of what is involved.

- Body awareness – concentrating on different parts of your body
- Tensing and relaxing each part of your body in turn
- Breathing exercises
- Imagery exercises
- Relaxation tapes: music or natural sounds such as birdsong and rippling streams

Make time for activities that relax you.

You may need help in finding a relaxation method that suits you. Ask if there is a nurse or other health therapist available to help you. They might also be able to put you in touch with people or organisations that are specially trained in teaching relaxation techniques.

Using guided relaxation CDs or MP3 files can be a good way to learn different exercises. The exercises often need to be guided for the first eight to ten times so that you can learn the skill of relaxing and letting go. There are many resources available on the internet that are free to download. Relaxation CDs can also be bought in most bookshops or music shops.

There is also a list of organisations at the back of this booklet that provide support for people with cancer, their families and friends through complementary therapies, counselling and information.

Coping with fatigue

Cancer and complementary therapies

There is great interest today in complementary treatments for cancer. Many people find them very helpful during their illness. The way cancer is treated often depends on the culture of the country in which you live. In Ireland, cancer treatments are based on scientific research, which allows the response to treatment, side-effects and the general effect of treatment to be predicted. You may hear about the following types of treatments or therapies.

**Conventional therapies**

Conventional therapies are treatments that doctors use most often to treat people with cancer. These include surgery, radiotherapy, chemotherapy, hormone therapy and biological therapy. They are tried and trusted methods where there is a long history of use. Many of the treatments have been tested in clinical trials.

**Complementary therapies**

Complementary therapies are treatments that are sometimes given together with conventional treatment. They include therapies such as:

- Meditation
- Relaxation
- Visualisation
- Gentle massage
- Aromatherapy
- Reflexology
- Music, art and dance therapy
- Nutrition therapy
- Shiatsu
- Yoga
- Acupuncture
- Hypnotherapy

Many people find that complementary therapies are very helpful in a number of ways. You may feel more positive about yourself and your illness. You may be better able to cope with the physical side-effects of cancer and the distressing emotions that it can often bring. Some complementary therapies also focus on the spiritual dimension of a person to aid healing.

National Cancer Helpline 1800 200 700
Alternative therapies

Alternative therapies are generally treatments that are used instead of conventional treatments. These therapies include diet therapy, megavitamin therapy and herbalism. The diet therapy in particular can often be restrictive. This means it does not allow you to eat foods that could be nutritious for you. Some restrictive diets can harm your health and may even cause malnutrition.

Most doctors do not believe that such treatments can cure or control cancer.

If you decide to have complementary or alternative treatments...

Before you decide to change your treatment or add any methods of your own, do talk to your doctor or nurse. Some methods can be safely used along with standard medical treatment. But others can interfere with standard treatment or cause serious side-effects. For that reason, do talk openly with your GP or cancer specialist if you are thinking of having treatment with either a complementary or alternative practitioner. Don’t be afraid that your doctor will be offended by your wish for other treatments. In fact, he or she may be able to recommend therapies that could be safe and useful for you.

Be cautious in selecting a practitioner. Don’t be misled by promises of cures. At present in Ireland, this area is not fully regulated. Ensure that the practitioners you plan to visit are properly qualified and have a good reputation. Check to see if they belong to a professional body or not. If you are unsure but would like to know what other patients have found helpful, contact your doctor or a patient support group. Also, it is important to make sure that the practitioner is charging a fair price for your treatment.

More information is available in a free booklet from the Irish Cancer Society called Understanding Cancer and Complementary Therapies. A Guide for Cancer Patients. If you would like a copy or more advice, call the National Cancer Helpline 1800 200 700.

Looking after someone who has fatigue

Looking after someone who has fatigue may not be easy. You may feel tired with all the worry and the extra work. It can be very straining as you adapt to a new way of life. Do find out as much as you can about the illness and its treatment. It can also help to plan as much as you can ahead of the discharge date. Ask to speak to a medical social worker about the community services that are available. Also ask for a contact name and telephone number at the hospital so that you can talk to someone if you have a problem.

Looking after yourself

Looking after someone can be tiring. But it is important that you look after yourself so you can continue to support your relative or friend. Set aside some time for yourself each week and do something you really enjoy. This can be hard when you have a lot to do and do not want to let your relative or friend down. It might help to involve other people and organisations with the caring so that you both do not become too tired.

If you are worried or upset, it might help to talk to a volunteer from one of the support groups that are available. Or you could make contact with your local community support centre. See pages 38 and 40 for more information.

Hints & Tips – carers

- Read the information in this booklet. It will help you find ways to manage your own fatigue and that of the person who has cancer.
- Write down the impact of fatigue on the patient’s daily life.
- Write down the impact of fatigue on your daily life.
- If possible, go with the patient on their visits to hospital. Discuss the impact of fatigue on your lives.
- Discuss with the doctors and nurses the ways of reducing fatigue that you have already tried.
- Discuss what could be causing the fatigue.
Support resources

Who else can help?

There are many people ready to help you and your family throughout treatment and afterwards.

- Medical social worker
- Cancer nurse specialists
- Psycho-oncology services
- Family doctor (GP)
- Community welfare officer and community health services
- Cancer support groups and centres
- Irish Cancer Society helpline
- Nurses

Medical social worker: The medical social worker in your hospital can help in many ways. He or she can give support and counselling to you and your family and give advice on benefits, entitlements and services available when you go home.

Cancer nurse specialists: Some of the major cancer treatment hospitals have oncology liaison nurses and/or cancer nurse co-ordinators. These specially trained nurses can support you and your family from the time of diagnosis and throughout treatment. These nurses along with other members of your medical team work together to meet your needs.

Psycho-oncology services: In some larger hospitals there are special units that provide psycho-oncology services. This means that you can receive psychological care and support during your diagnosis, treatment and recovery by a team of experts. Usually the team consists of psychiatrists, clinical psychologists and nurses working closely together.

Family doctor (GP): You may feel comfortable talking to your family doctor (GP) about your fatigue and cancer too. He or she can discuss any of your queries and offer advice and support.
Community health services: When you go home, there are various community health services available from your local health centre. These centres have public health nurses (who can visit you at home), welfare officers and home-help organisers. If you live far from your hospital, your community welfare officer can also help with practical issues such as transport costs, financial worries, etc. All these people in community health services can provide advice and support. More information on the services is available either from the medical social worker in the hospital before you go home or at your local health centre.

Cancer support groups and centres: Joining a support group can put you in touch with people who have been in a similar situation. They can give you practical advice about living with cancer. Cancer support centres and groups are found in most counties in Ireland and can offer a wide range of services. Some are listed at the back of this booklet.

Irish Cancer Society: The staff of the National Cancer Helpline will be happy to discuss any concerns you or your family may have, at any stage of your illness. Call 1800 200 700 for information about any of the services outlined above or for support services in your area.

Social welfare benefits and allowances

Information on the following is given in this section:

- Illness Benefit
- Disability Allowance
- Invalidity Pension
- Carer’s Allowance
- Carer’s Benefit
- Carer’s Leave
- Appliances
- Travel to hospital

Illness Benefit

This is a benefit for insured people. Your eligibility will depend on your PRSI contributions. You must be under 66 and unable to work due to illness. Each week you must send a social welfare medical certificate signed by your doctor to the Dept of Social Protection, PO Box 1650, Dublin 1. Tel (01) 679 7777. These certificates are available from your GP and from the hospital you attend during inpatient care. You should send your claim to the Department within 7 days of becoming ill and unable to attend work. A delay might result in loss of payment. The benefit lasts for 2 years.

Disability Allowance

You might qualify for disability allowance if you are not eligible for illness benefit and not able to work for at least 1 year. Disability allowance is a weekly allowance paid to people with an injury, disease or a disability who are aged between 16 and 66. For this allowance, you must satisfy a means test, live in Ireland and be medically suitable. To be medically suitable, you should have an illness that has continued or may continue for at least 1 year.

You are also allowed a free travel pass and will get extra social welfare benefits, like the household benefits package. This includes allowances for gas, electricity, telephone rental and a free television licence. You are also entitled to a medical card and assistance under the Supplementary Welfare Allowance Scheme. Application forms are available from post offices, social welfare offices or the Disability Allowance Section, Social Welfare Services Office, Government Buildings, Ballinalee Road, Longford. Tel: (043) 334 0000 or Locall 1890 927 770.

Invalidity Pension

This is a pension paid instead of an illness benefit or disability allowance, if you are unable to work permanently. There are three cases where you can be eligible. (1) If you have been incapable of work for at least 12 months and likely to be incapable for at least another 12 months. (2) If you are permanently incapable of work. (3) If you are over the age of 60 and have a serious illness or incapacity.

Your eligibility will also depend on your PRSI contributions. You are also allowed a free travel pass and will get extra social welfare benefits, like the household benefits package. This includes allowances for gas, electricity, telephone rental and a free television licence.
Coping with fatigue

By law you may be entitled to unpaid temporary leave from your employment. Carer’s leave allows you to leave your employment for up to 104 weeks to care for someone in need of full-time care and attention. The leave will be unpaid, but you will have your job kept open for you while you are on leave. You do not need to be eligible for carer’s allowance or carer’s benefit to apply for carer’s leave. You must have worked for your employer for a continuous period of 12 months to be eligible to apply for carer’s leave. The person you are caring for can be a partner or family member, friend or colleague. The family doctor (GP) of the person you are caring for will also need to fill in part of your application form.

You can work while you are on carer’s leave for up to 15 hours a week. But you must make sure your income from employment or self-employment is less than a weekly income limit set by the Department of Social Protection. For more information, contact the Carer’s Benefit Section, Social Welfare Services Office, Government Buildings, Ballinalee Road, Longford. Tel: (043) 334 0000 or Local 1890 927 770.

Appliances

For patients who have medical cards most appliances are free of charge or subsidised. Talk to your public health nurse or medical social worker if you need a walking frame or wheelchair.

Travel to hospital

You may be faced with many expenses including travelling to and from hospital. If your travel costs are very expensive, discuss it with your medical social worker at the hospital. Limited help may also be available from your community welfare officer. Some HSE areas provide transport services to hospitals for outpatient appointments and day centres. Sometimes the HSE may assist with transport costs for a person who has to travel a long distance to a hospital.

In general, those who do not have a medical card may be charged for the service. However, the practice varies between HSE areas and often depends on personal circumstances. Charges may be waived in certain cases, like hardship.

See page 39 for information on the Care to Drive and Travel2Care schemes run by the Irish Cancer Society. Some local communities may also provide volunteer transport services.
Further information

Depending on your circumstances at the time of your illness, there are many other benefits and entitlements that may be relevant to you. Always have your PPS number (old RSI number) to hand when you are enquiring about entitlements and benefits. The most direct way to check your eligibility is to contact:

- Your community welfare officer in your local health centre
- The medical social worker in the hospital you are attending

For social welfare queries, contact:

Dept of Social Protection – Tel: 1850 662 244
Information Service Leaflet line: 1890 202 325
Oisín House Email: info@welfare.ie
212–213 Pearse Street Website: www.welfare.ie
Dublin 2

If you have queries about health and social services, contact the HSE office in your area: HSE Dublin North East, HSE Dublin Mid-Leinster, HSE South, and HSE West. For more information contact:

**HSE infoline:** 1850 24 1850 **Email:** info@hse.ie **Website:** www.hse.ie

Information is also available from your local Citizens Advice Centre. A list of these centres is available from:

**Citizens Information Board** (formerly Comhairle)
Ground Floor, George’s Quay House, 43 Townsend Street, Dublin 2
Tel: 01 605 9000; Local 1800 777 121
Email: info@ciboard.ie; Website: www.citizensinformation.ie
Coping with fatigue

Cancer Information Service (CIS)

The Society provides a Cancer Information Service with a wide range of services. The National Cancer Helpline is a freefone service that gives confidential information, support and guidance to people concerned about cancer. It is staffed by specialist cancer nurses who have access to the most up-to-date facts on cancer-related issues. These include prevention of cancer, risk factors, screening, dealing with a cancer diagnosis, different treatments, counselling and other support services. The freefone helpline can also put you in contact with the various support groups that are available. The helpline 1800 200 700 is open Monday to Thursday from 9am to 7pm, and every Friday from 9am to 5pm.

- All queries or concerns about cancer can be emailed to the CIS at helpline@irishcancer.ie
- Message Board is a discussion space on our website (www.irishcancer.ie) to share your stories, ideas and advice with others.
- The CancerChat service is a live chatroom with a link to a Cancer Information Service nurse.

Daffodil Centres providing cancer information

Daffodil Centres are located in a number of Irish hospitals. These were set up by the Irish Cancer Society in partnership with each hospital and are an extension of the Cancer Information Service. They are generally found near the main entrance of the hospital and are open during the day. Staffed by a specialist nurse and trained volunteers, they provide a range of information, advice, help and support on all aspects of cancer, free of charge.

Daffodil Centres give enquirers a chance to talk in confidence and be listened to and heard. If you are concerned about cancer, diagnosed with cancer or caring for someone with cancer, you are welcome to visit the centre. Do check to see if there is a Daffodil Centre in your hospital.

If you have financial worries...

A diagnosis of cancer can sometimes bring the added burden of financial worries. You may find that you have a lot more expenses, like medication, travel, food, heating, laundry, clothing and childcare costs. If you are not able to work or unemployed, this may cause even more stress. It may be hard for you to recover from cancer if you are worried about providing for your family and keeping a roof over your head.

There is help available if you find it hard to cope with all these expenses. Contact your medical social worker in the hospital or your local health centre for advice. The Irish Cancer Society can also in certain cases give some assistance towards travel costs and other expenses because of your illness. See page 39 for more details. You can also call the National Cancer Helpline 1800 200 700 and the nurse will suggest ways to help you manage.

If you feel you are getting into debt or are in debt, there is help available. Contact the Money Advice and Budgeting Service on the MABS Helpline 1890 283 438. This service can help you work through any financial issues you have. They can assess your situation, work out your budget, help you deal with your debts and manage your payments. The service is free and confidential. See page 40 for contact details. A useful book for preparing low-budget nutritious meals is 101+ Square Meals. See page 46 for more information.

Irish Cancer Society services

The Irish Cancer Society funds a range of cancer support services that provide care and support for people with cancer at home and in hospital.

- Cancer Information Service (CIS)
- Daffodil Centres providing cancer information
- Cancer support groups
- Peer-to-peer support
- Counselling
- Night nursing
- Oncology liaison nurses
- Cancer information booklets
- Financial support
- Care to Drive transport project
- Financial support
Cancer support groups
The Irish Cancer Society funds a range of support groups set up to support you and your family at time of diagnosis, throughout treatment and afterwards. See page 40 for more details.

Peer-to-peer support
Many patients find it helpful to talk to someone who has had a diagnosis of cancer and who has recovered. The Irish Cancer Society can put you in touch with someone who has been trained to give you emotional and practical support. All volunteers have had a personal experience of cancer and understand the emotional and physical impacts of the disease. If you would like to make contact with a volunteer, please call the National Cancer Helpline 1800 200 700.

Counselling
Coping with a diagnosis of cancer can be very stressful at times. Sometimes it can be hard for you and your family to come to terms with your illness. You might also find it difficult to talk to a close friend or relative. In this case, counselling can give you emotional support in a safe and confidential environment. Call the helpline 1800 200 700 to find out about counselling services provided by the Irish Cancer Society and services available in your area.

Night nursing
The Society can provide a night nurse, free of charge, for up to 10 nights if you need end-of-life care at home. The night nurse can also give practical support and reassurance to your family. You can find out more about this service from your GP, local public health nurse, a member of the homecare team or the palliative care services at the hospital. Homecare nurses can offer advice on pain control and managing other symptoms.

Oncology liaison nurses
The Society funds oncology liaison nurses who can give you and your family information as well as emotional and practical support. Oncology liaison nurses work as part of the hospital team in specialist cancer centres.

Cancer information booklets
These booklets provide information on all aspects of cancer and its treatment. They also offer practical advice on learning how to cope with your illness. The booklets are available free of charge from the Society.

Financial support
A diagnosis of cancer can bring with it the added burden of financial worries. In certain circumstances, the Irish Cancer Society can provide limited financial help to patients in need. You may be suitable for schemes such as Travel2Care or Financial Aid. The Travel2Care scheme can help with your travel costs if you have genuine financial hardship due to travelling to a designated cancer centre or approved satellite centre. It will help with the costs of public transport, such as trains or buses, private transport costs, or petrol and parking. If you are travelling to a Rapid Access Diagnostic Clinic, you may qualify for the Travel2Care scheme.

Travel2Care: If you would like to request this kind of help, contact your oncology nurse or the Irish Cancer Society.

Financial Aid: For this kind of help, contact the medical social work department in your hospital. You can also speak to your oncology nurse or contact the Irish Cancer Society.

See our website for more information: www.cancer.ie

Care to Drive transport project
Care to Drive is a scheme operated by the Irish Cancer Society. It provides free transport for patients to and from their treatments using volunteer drivers. All of the volunteers are carefully selected and trained. You, the patient, are collected from your home, driven to your appointment and brought back home again.

If you would like more information on any of the above services, call the National Cancer Helpline 1800 200 700.

Coping with fatigue

Questions to ask your doctor
Here is a list of questions you may wish to ask. Never be shy about asking questions. It is always better to ask than to worry.

- Will the cancer treatment that I am getting cause fatigue?
- Are there ways to control my fatigue or make it better?
- How can I cope with my fatigue?
- How can I best support my relative who has fatigue?
- What are the things I can do to help with my fatigue?

Mary Quinn, Clinical Nurse Specialist
Susan Rowan, Patient Education Editor

Would you like more information?
We hope this booklet has been of help to you. If you would like more information or someone to talk to, please call the National Cancer Helpline 1800 200 700.

Would you like to be a patient reviewer?
If you have any suggestions as to how this booklet could be improved, we would be delighted to hear from you. The views of patients, relatives, carers and friends are all welcome. Your comments would help us greatly in the preparation of future information booklets for people with cancer and their carers. Please fill in the postcard in the pocket inside the back cover, and post it back to us for free.

If you wish to email your comments, have an idea for a new booklet or would like to review any of our booklets, please contact us at reviewers@irishcancer.ie

If you would prefer to phone or write to us, see contact details below.

Would you like to help us?
The Irish Cancer Society relies entirely on voluntary contributions from the public to fund its programmes of patient care, education and research. If you would like to support our work in any way – perhaps by making a donation or by organising a local fundraising event – please contact us at CallSave 1850 60 60 60 or email fundraising@irishcancer.ie

Irish Cancer Society, 43/45 Northumberland Road, Dublin 4.
Tel: 01 231 0500 Email: info@irishcancer.ie Website: www.cancer.ie
The mission of the Irish Cancer Society is to play a vital role in achieving world-class cancer services in Ireland, to ensure fewer people get cancer and those that do have better outcomes. Our goals are focused around prevention, survival and quality of life with three programme areas to achieve them: advocacy, cancer services and research.
